Professional Summary

Cybersecurity-focused IT Support Engineer and Junior Penetration Tester with hands-on experience in system administration, network security, application security, and vulnerability assessment. Proven ability to troubleshoot enterprise systems, perform security testing, and implement risk mitigation strategies. Skilled in penetration testing methodologies, web application security, and IT infrastructure support. Certified in eJPT, ISC² CC, Google Cybersecurity, Google IT Support, and Cisco Ethical Hacking.

Core Skills

- IT Support & Troubleshooting
- Network & System Administration
- Penetration Testing (PTES)
- Web Application Security (XSS, SQLi, IDOR)
- Vulnerability Assessment & Risk Management
- Windows & Linux Administration
- Security Tools (Nmap, Burp Suite, Metasploit, Wireshark)
- Incident Response & Documentation

Tools & Technologies

- Offensive Tools: Nmap, Burp Suite, Metasploit, Netcat, Hydra, SQLMap, Gobuster, WPScan, Nikto, John the Ripper, Hashcat
- Systems: Kali Linux, Windows Server, Ubuntu
- Networking: DNS, DHCP, TCP/IP, VPN, Firewalls
- Scripting: Bash, Python (beginner)
- Databases: MySQL, MariaDB
- Others: Wireshark, Splunk, Sysmon, SharePoint access management

Professional Experience

AAVA Brands Limited – IT Support Engineer | Security Analyst (2023 – Present)

- Provided technical support and resolved system/network issues.
- Conducted internal security checks and vulnerability assessments.
- Built and maintained a risk register to track and mitigate organizational risks.
- Created and deployed a VM server environment allowing 5 users remote AI access.
- Managed user access, SharePoint permissions, and system security.
- Identified web application vulnerabilities and reported remediation steps.
- Assisted in improving application security posture through responsible vulnerability reporting and remediation recommendations.

Vicmart Enterprises – IT Support Engineer (2018 – 2023)

- Delivered end-user support and resolved IT tickets.
- Assisted with security awareness and documentation.
- Managed reporting systems and network troubleshooting.

Projects

Web Application Penetration Test – Micro-CMS v1 – [Medium write up Link](#)

Conducted a systematic security assessment of a Content Management System, successfully identifying and exploiting 4 critical vulnerabilities to capture all system flags.

Key Vulnerabilities:

- **IDOR:** Bypassed authorization on the /edit route to access restricted data.
- **Stored XSS:** Exploited unvalidated "Title" fields to achieve persistent script execution.
- **SQL Injection:** Used boolean-based payloads (' or 1=1) to bypass database lookups and extract privileged records.
- **Reflected XSS:** Leveraged improper error handling on 404 pages to execute JavaScript via the URL path.

Web Application Security Assessment – AAVA Brands:

- Identified misconfigurations including debug exposure and IDOR risks.
- Provided remediation aligned with OWASP Top 10.

Information Security Risk Management – AAVA Brands:

- **Risk Analysis:** Identified threats like credential stuffing and data breaches across critical assets such as web applications and database servers.
- **Vulnerability Assessment:** Pinpointed system weaknesses including unpatched databases, lack of rate limiting, and weak password policies.
- **Strategic Mitigation:** Developed a risk register calculating impact vs. likelihood and recommended controls like MFA, patch management, and IDS/IPS monitoring.

Secure AI Infrastructure Deployment – AAVA Brands:

- **Initiative:** Built an isolated Windows Server 2019 environment to bypass domain-level blocks on essential AI tools (ChatGPT, Julia, Notebooks).
- **Access Control:** Configured secure remote access for senior management, providing high-productivity tools without compromising the primary DPworld domain controller.
- **Governance:** Executed the project with end-to-end approval from the IT Manager, Head of IT, and General Manager.

Certifications

- eLearnSecurity Junior Penetration Tester (eJPT) (INE)
- ISC2 Certified in Cybersecurity (CC)
- Google IT Support Certificate (Coursera)
- Google Cybersecurity Professional Certificate (Coursera)
- Cisco Ethical Hacking (Cisco Netacad)
- ISO/IEC 27001:2022 ISMS
- Web Security Fundamental (Tryhackme)
